Monthly Market Charts

Introduction

You read sales last month were up x% over last year. What does that really mean??

Was last year a down year, an average year, or a record year? Is that GTA number you're seeing driven by the 416 or the 905? Is there a clear trend? The charts that follow will add **context** and **perspective** to Toronto's monthly real estate statistics. My focus is the **416**, so I pull those numbers out of TREB's broader GTA-wide aggregate figures.

I also separate Toronto's **two distinct market segments**: houses (freeholds) and condos, because lumping them together obscures a lot of information, and you are probably more interested in one than the other. With segmentation and some historical context, I aim to give you a clearer vision of market movements and trends.

416 Market Breakdown

Share of Transactions - last 12 months

Share of House Transactions - last 12 months

Share of Condo Transactions - last 12 months

1 year ago: Condos 61% / Houses 38%

5 years ago: Condos 51% / Houses 48%

10 years ago: Condos 49% / Houses 50%

15 years ago: Condos 43% / Houses 55%

20 years ago: Condos 39% / Houses 59%

As the supply of houses is essentially fixed, and more new condos are completed, transaction share should keep **shifting towards condos**. Also, condos are often a “starter home” and not held onto as long on average as houses.

While **houses** were only 38% of 2018 sales transactions, they were **55% of dollar volume** (38% and 59% in 2017, 35% and 64% in 2016).
